

Velour is a composite yarn made from components with differential shrinkages. Fabric made out of Velour combines softness with drape. Fabric constructions to enhance the peach skin effect are possible. Various types of fabric textures can be generated by varying fabric construction and operating parameters. Due to higher dye pick up Velour is also used to make jet black fabrics used in veils applications. In twisted form it gives soft yet crispy touch.

Features :

- ❖ Peach skin like effect
- ❖ Soft touch
- ❖ Excellent drape
